## Abstracts

A vehicle negative ion purifier is a device that purifies the air in the car by releasing negative ions. It removes harmful substances in the air, such as PM2.5, formaldehyde, benzene, sulfur dioxide, etc. through the action of negative ions, helping to improve the air quality in the car and create a fresher and healthier environment. The working principle of the vehicle negative ion purifier is based on negative ion release technology. When the purifier is turned on, it releases a large amount of negative ions, which can absorb pollutants in the air, condense them into particles, and then settle or be captured by filters, thereby refreshing the air and improving air quality.

The global Vehicle Negative Ion Purifier market size was estimated at USD 264.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
