## Abstracts

The car remote control service is a cloud or mobile service based on the Internet of Vehicles (IoV) technology. It realizes remote control and status management of the vehicle through wireless communication networks (such as 4G/5G, Bluetooth, Wi-Fi) and vehicle terminal equipment linkage. Its core functions include vehicle positioning tracking, door unlocking/locking, air conditioning/window/engine start-stop control, charging management (for new energy vehicles), fault diagnosis and OTA (over-the-air download) upgrades. The service relies on the data interaction between the vehicle-mounted T-Box (remote communication module) and the cloud platform, and must meet low latency, high security (such as AES encryption) and cross-platform compatibility (such as mobile APP, web page).

The global Vehicle Remote Control Service market size was estimated at USD 1358.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
