Abstracts

Vehicle Sharing Systems (VSS) refer to technology-enabled platforms that provide temporary access to shared vehicles?such as cars, scooters, or bicycles?typically through short-term rentals facilitated via mobile applications or membership-based access. These systems are designed to offer on-demand mobility solutions, reduce individual vehicle ownership, and promote sustainable urban transportation by optimizing vehicle utilization through centralized fleet management, real-time tracking, and automated billing. VSS can be categorized into various models, including free-floating (where vehicles can be picked up and dropped off anywhere within a designated zone), station-based (requiring return to specific hubs), and peer-to-peer (enabling private vehicle owners to rent out their cars). The integration of IoT sensors, GPS, and digital payment systems enables seamless user experiences, while data analytics support operational efficiency, demand forecasting, and maintenance scheduling. By providing flexible, cost-effective alternatives to traditional car ownership or public transit, VSS aim to address urban congestion, lower carbon emissions, and enhance transportation accessibility.

The global Vehicle Sharing Systems(Vss) market size was estimated at USD 14500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.50% during the forecast period.
