Report Overview

Vehicle steer-by-wire refers to a system that uses cables and wiring to electronically perform steering operations in a vehicle. In such a setup, there is no longer any mechanical connection between the input component for steering (e.g. the steering wheel) and the vehicle's wheels. Instead, all steering commands are transmitted electrically by a control unit to a motor that then executes the steering movement, thereby causing the wheels to turn in a corresponding manner.

The Global Vehicle Steer by wire System Market Size was estimated at USD 88.1 million in 2021 and is projected to reach USD 887.70 million by 2028, exhibiting a CAGR of 39.10% during the forecast period.
