Abstracts

A vehicle thermal imager is an advanced automotive safety and assistance system that uses infrared technology to detect and display heat signatures from objects, people, or animals in the vehicle's path, particularly in low-visibility conditions such as darkness, fog, or heavy rain. By converting thermal radiation into a visible image, it enhances driver awareness beyond the capabilities of traditional headlights or cameras, offering improved detection of living beings and warm objects that may not be visible to the naked eye or conventional sensors.
