Abstracts

Ventless Dishwasher is a dishwasher that does not require an external ventilation system, but uses an internal steam condensation and water circulation system to deal with the steam and odors generated during the cleaning process. Such dishwashers typically employ special condensing technology that condenses steam into water and recycles it, thus avoiding the ventilation ducts required for conventional dishwashers. Draftless dishwashers are easy to install and have high space utilization, especially for environments with limited kitchen space or poor ventilation, such as small apartments, compact kitchens and some commercial kitchens.

The global Ventless Dishwasher market size was estimated at USD 498.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
