Abstracts

Vermicompost is the product of the composting process using various species of worms, usually red wigglers, white worms, and other earthworms, to create a heterogeneous mixture of decomposing vegetable or food waste, bedding materials, and vermicast, also called worm castings, worm humus or worm manure, is the end-product of the breakdown of organic matter by an earthworm. These castings have been shown to contain reduced levels of contaminants and a higher saturation of nutrients than do organic materials before vermicomposting. Vermicompost, or vermiculture, most often uses two species of worms: Red Wigglers (*Eisenia foetida*) or *Eudrilus eugeniae* rarely found in soil and are adapted to the special conditions in rotting vegetation, compost and manure piles. North America is the largest market with about 16% market share. Europe and Japan are follower, accounting for about 30% market share. The key players are MyNOKE, NutriSoil, Davo's Worm Farms, Earthworm, Wormpower, Kahariam Farms, SAOSIS, Sri Gayathri Biotec, Jialiming, Dirt Dynasty, SLO County Worm Farm, Agrilife, Suman Vermi Compost etc. Top 3 companies occupied about 31% market share.
