Abstracts

Vertebrae Bend Restrictor (VBRs) for offshore wind is a device crafted to safeguard cables from excessive bending stress, its core function being to maintain a smooth bending radius that equals or exceeds the cable's minimum allowable value during operation. Characterized by a modular design, it offers flexibility, allowing the addition of components as per design needs, and its parts possess full - range freedom before reaching the locking bending radius. Made from materials like polyurethane or steel with high hardness, strength, and corrosion resistance, it can endure harsh conditions. Technically, it must precisely transfer the applied bending moment through a specifically - designed steel interface structure when the parts lock together, ensuring the cable remains unharmed under potential destructive loads.
