Report Overview

Vertical-axis wind turbines (VAWTs) are a type of wind turbine where the main rotor shaft is set vertically and the main components are located at the base of the turbine. This arrangement allows the generator and gearbox to be located close to the ground, facilitating service and repair. VAWTs do not need to be pointed into the wind, which removes the need for wind-sensing and orientation mechanisms. Vertical axis wind turbines offer several potential advantages over the standard horizontal axis wind turbines which are now in common use worldwide.

The global Vertical-axis Wind Turbines (VAWTs) market size was estimated at USD 15030 million in 2023 and is projected to reach USD 20181.30 million by 2030, exhibiting a CAGR of 4.30% during the forecast period.
