## Abstracts

Vertical conical dryer is a drying equipment commonly used in chemical, pharmaceutical, food and other industries. Its characteristics are that the drying chamber is conical, usually installed vertically, and can efficiently dry wet materials. The equipment evaporates the water in the material through a heating medium (such as steam, hot water, etc.) and removes the steam through vacuum or airflow. Vertical conical dryer is suitable for drying high-viscosity, heat-sensitive or granular materials. Its unique conical design allows the material to turn freely under the action of gravity during the drying process, avoiding the material sticking to the wall and agglomeration, and has good heat and mass transfer efficiency.

The global Vertical Cone Dryer market size was estimated at USD 393.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
