## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vertical Continuous Copper Plating Equipment (VCP) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Vertical continuous copper plating equipment (VCP) is a continuous, rack-mounted copper plating production line specifically designed for copper plating on electronic substrates. Through vertical mounting, continuous conveying, automated loading and unloading, and multiple plating tanks in series, it achieves highly uniform, high through-hole filling capability, and a highly efficient copper plating process. It is widely used in multi-layer rigid boards, HDIs, substrates, rigid-flex boards, and semiconductor packaging substrates. In 2024, global production of vertical continuous copper plating equipment reached 213 units, with an average selling price of K US\$2184 per unit. Global production capacity in 2024 will be approximately 290 units. For VCP, the upstream is anchored by phosphorized copper anodes, electrolytes/additives, and power/chemical-resistant infrastructure. Key vendors include Univertical (anodes), Atotech / MacDermid Alpha (chemistry & integrated processes), KraftPowercon (rectifiers), and R?chling/SIMONA (PP/PVDF tank materials). Downstream demand is led by advanced PCB and IC substrate makers?e.g., ZDT, Unimicron, AT&S, Ibiden, Nan Ya PCB?with mSAP/aSAP migration and AI/HPC cycles supporting steady equipment and chemistry spend. Vertical continuous copper plating equipment (VCP) are mission-critical wet-process equipment for PCB and IC substrate manufacturing. By vertically hanging panels and conveying them through serial plating/pretreatment/post-treatment tanks, VCP delivers tight thickness uniformity and strong throwing/void-free via-fill performance for high-aspect-ratio through/blind vias?well aligned with advanced mSAP/aSAP, HDI, IC substrate and rigid-flex

applications. Recent iterations from leading vendors?e.g., Atotech (MKS; vPlate?) and Taiwan-based AEL?highlight thinner panels, tighter uniformity and enhanced in-line control.

The global Vertical Continuous Copper Plating Equipment (VCP) market size was estimated at USD 465.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
