## Abstracts

A Vertical Drilling Rotary Steerable System (RSS) is a downhole drilling tool designed to maintain a wellbore in a true vertical trajectory while rotating the drill string. Unlike conventional systems that require sliding or manual corrections, vertical RSS automatically adjusts the drilling direction using internal steering mechanisms?typically based on push-the-bit or point-the-bit technologies?allowing continuous rotation and optimized weight-on-bit transfer. This results in faster penetration rates, reduced wellbore tortuosity, and improved drilling efficiency, especially in deviated formations or complex geological environments. Vertical RSS tools are widely used in oil and gas drilling to improve wellbore quality and reduce operational risk.

The global Vertical Drilling Rotary Steerable System market size was estimated at USD 375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
