Report Overview:

Vertical farms grow mainly microgreens, lettuce, and basil, which are low-growing plants with a short growing cycle. The problem is that they quickly saturate the market – no matter how useful microgreens are, they are not food, but seasoning for a salad or a sandwich. The best crops for vertical farming are typically leafy greens, herbs, and microgreens, but many others can work as well. Some vertical farms grow fruits, flowers, grains such as rice, and other vegetable varieties.
