## Abstracts

A vertical frac tank is a vertical pressure storage container used in the field of energy extraction such as oil and natural gas, especially in fracturing operations. The tank is in an upright state and installed perpendicular to the ground. This design is conducive to maximizing the storage capacity in a limited space, and is convenient for connection and coordination with other equipment. It can also better adapt to different terrains and site conditions. It is generally made of high-strength materials such as high-quality steel to ensure that it can withstand the high pressure, high temperature and erosion of various chemicals generated during the fracturing operation, and ensure the safety and stability of the equipment.
