Abstracts

Vertical Launch Systems (VLS) are advanced naval missile launch platforms designed to store, protect, and fire missiles from warships, enabling rapid, multi-directional engagement of aerial, surface, and subsurface threats with minimal deck space and crew intervention. These systems consist of modular canisters arranged vertically within a ship's hull, each containing one or more missiles ready for launch; VLS enhances operational flexibility, reduces reaction time, and supports a variety of missile types such as surface-to-air, anti-ship, land-attack, and anti-submarine weapons making them a cornerstone of modern naval warfare.
