Report Overview

Vertical lift table milling machine is a milling machine equipment with a spindle perpendicular to the workbench and the workbench can be lifted up and down. It is suitable for processing planes, bevels, grooves, holes, etc. of various parts. It is an ideal processing equipment for machinery manufacturing, molds, instruments, meters, automobiles, motorcycles and other industries. Vertical lift table milling machines can use a variety of tools such as face milling cutters, end mills, cylindrical milling cutters, saw blade milling cutters, and round milling cutters to process various types of parts. Since the machine tool has sufficient power and rigidity as well as a large speed regulation range (spindle speed and feed rate), carbide tools can be fully utilized for high-speed cutting to improve production efficiency. The main components of the vertical lifting table milling machine, such as the base, body, workbench, etc., are cast with high-strength materials and are artificially aged to ensure the stability of the machine tool for long-term use. At the same time, the workbench has three feeding modes in the X/Y/Z direction: manual feeding, motorized feeding, and motorized fast feeding. Fast feeding can enable the workpiece to quickly reach the processing position and shorten the non-processing time. The design of the vertical lifting table milling machine conforms to the principles of ergonomics, and the operation panels are designed with figurative symbols, which are simple and intuitive. In addition, the lubrication device can force lubricate the longitudinal, transverse, and vertical screws and guide rails to reduce the wear of the machine tool and ensure the efficient operation of the machine tool.

The global Vertical Lifting Table Milling Machine market size was estimated at USD 905 million in 2023 and is projected to reach USD 1281.94 million by 2030, exhibiting a

CAGR of 5.10% during the forecast period.

North America Vertical Lifting Table Milling Machine market size was USD 235.82 million in 2023, at a CAGR of 4.37% during the forecast period of 2024 through 2030.
