## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vertical Parting Cold Core Box Shooter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global vertical parting cold core box shooter production reached approximately 2000 units, with an average global market price of around K US\$ 113.55 per unit. A vertical parting cold core box shooter is a cold core box core - making equipment with a vertically - parted mold structure. It injects liquid resin sand into the core box through vertical mold opening and closing, and the resin sand is rapidly cured at room temperature by a catalyst to form high - precision sand cores. Its core feature is that the vertical parting allows the top and bottom of the sand core to be demolded simultaneously, making it particularly suitable for manufacturing complex sand cores with relatively large height, symmetrical structure, or requiring vertical core extraction (such as engine cylinder head water jacket cores and valve body cores). It has advantages such as simple mold structure, high demolding efficiency, and good dimensional stability of sand cores, and is widely used in the precision core - making processes of high - end casting fields such as automotive engines, hydraulic equipment, and farm tools.
