Report Overview

Vertical Platform Lifts (VPLs) are mobility assistance devices designed to transport individuals, particularly those with limited mobility, between different levels of a building, such as between a ground floor and an elevated entrance or between floors in a home or commercial space. They consist of a platform that moves vertically along a rail or track system, often equipped with safety features such as guardrails, non-slip surfaces, and emergency stop buttons. VPLs are distinct from stairlifts or home elevators, as they are typically installed outdoors or in open indoor spaces where traditional elevators may not be feasible due to space or cost constraints. These lifts are commonly used in residential settings for accessibility compliance, as well as in commercial and public buildings to meet ADA (Americans with Disabilities Act) or similar accessibility regulations globally. The market for VPLs is driven by an aging population, increasing awareness of accessibility needs, and stricter building codes mandating inclusive design, making them a critical solution for both private and public infrastructure.

The global Vertical Platform Lifts VPL market size was estimated at USD 2383.46 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.36% during the forecast period.
