Report Overview

The vertical sand mill is developed from the ball mill. Compared with the ball mill, the grinding particle size is finer and the grinding quality is better. The sand mill disperses, crushes, grinds, homogenizes, and depolymerizes the slurry flowing through the cavity through the shear force and collision force between the beads in the cavity. It is currently the most widely applicable material particle size and the most advanced. , The grinding equipment with the highest grinding efficiency, the energy density per unit volume is the largest, combined with the high-quality cooling system and automatic control system, it can complete the continuous grinding and continuous discharging of the slurry, which greatly improves the production efficiency of the sand mill . Because of its advantages of high energy density, fine product particle size, low environmental pollution, simple equipment structure, and convenient maintenance, it is widely used in lithium batteries, coatings, paints, chemicals, medicine and other fields.
