Report Overview:

The characteristic of the vertical sand mill is that the raw materials are fed from the bottom to the top and discharged from the top. All the raw materials sent into the grinding cylinder are 100% completely ground, so the most complete grinding effect can be achieved. And the grinding is run in a fully enclosed grinding cylinder, so there is no problem of solvent volatilization polluting the air, which can ensure the physical and mental health of the staff. The vertical integral design integrates the main machine of the sand mill, the feeding pump and the electrical control box, so that the machine does not take up space and is easy to operate. The vertical sand mill is one of the equipment that works continuously without interruption and has high speed and high efficiency. The vertical sand mill is very suitable for dispersing and grinding some high-viscosity materials, and makes the particle size of the materials meet very fine requirements. It is suitable for grinding and manufacturing medium and high viscosity liquid raw materials such as paint coatings, inks, pigments and dyes, medicines, cosmetics, food, electronic raw materials, etc.
