## Abstracts

Vertical screw elevators, also known as vertical screw conveyors or spiral conveyors, are mechanical devices designed for the vertical transportation of bulk materials, powders, granules, or semi-solid substances through a rotating helical screw enclosed within a stationary tube or trough; these systems operate by utilizing the rotational motion of the screw to lift materials along the axis, making them suitable for applications where space is limited, gentle handling is required, or where traditional belt or bucket elevators may be impractical due to factors such as material characteristics, containment needs, or installation constraints.
