Abstracts

Vertical screw pump is a type of positive displacement pump that uses one or more screws to rotate inside the pump casing to transport fluid. Its characteristic is vertical installation, that is, the pump shaft is perpendicular to the ground, suitable for situations where space is limited or vertical installation is required. The mechanical action during the rotation of the screw transports the fluid to the desired position. It is usually used in situations where smooth fluid transport is required, suitable for handling liquids with high viscosity, corrosiveness, or other special requirements. Mainly including single screw pumps, twin-screw pumps, three screw pumps, five screw pumps, etc.

The global Vertical Screw Pump market size was estimated at USD 1357.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
