Abstracts

A Vertical Stranding Machine is a special equipment used in cable manufacturing. Its main function is to twist multiple insulated cores into cables according to certain rules, and complete filling, wrapping and other process operations at the same time. Its structure is usually arranged vertically, which is convenient for the cores to maintain uniform tension during the twisting process and achieve an efficient production process. The vertical cabling machine is suitable for the production of various types of power cables, communication cables and special cables, especially for long-length and high-demand cable manufacturing tasks.
