### Report Overview

Top loading equipment is becoming more and more popular in carton packaging. Flexible cartoners load from above and are more flexible than horizontal machines. Robotic arms can be equipped with different vacuum grippers to suit widely varying products. This solution also works well for composite packaging, for example in medicine, where blister packs, ampoules, vials, drug instructions and scoops can all be packaged with top-loading equipment. In the confectionery sector, top-loading equipment is used to place a wide variety of different shapes of chocolate in deep pans. The flexibility of top-loading equipment operation is equally effective with larger packages. The machine can adapt to different container shapes with only minor adjustments. This means that new product types can meet future requirements.
