Report Overview

Vertical Water Meter is a water meter installed in the vertical direction of the pipeline, used to measure the water flow in the vertical pipeline. It usually consists of upper and lower parts, the upper part is the metering part, and the lower part is the rotor. The working principle of the Vertical Water Meter is based on the rotation of the rotor, when the water flows through the rotor, the rotor will turn, and the speed will be proportional to the water flow. The metering section measures the rotational speed of the rotor and converts it into flow data for the user.
