Barrel Compressors also known as Vertically split casing compressors. Vertically split casings are formed by a cylinder closed by two end covers, also referred as barrel. The advantage of the vertically split joint is its high-pressure capability due to the one-piece construction and conventional, proven flange type seals at each end. It is engineered for large-flow, high-pressure continuous industrial processes, demonstrating exceptional reliability and safety in handling flammable, explosive, or corrosive media (e.g., natural gas, hydrogen, syngas).

The global Vertically Split Casting Compressors market size was estimated at USD 3014.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
