## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Veterinary Absorbable Sutures competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of veterinary absorbable sutures reached approximately 115 million units, with an average selling price of US\$4.80 per unit. Veterinary absorbable sutures are specialized medical materials used in animal surgery, tissue suturing, and wound closure, and are naturally biodegradable and absorbable in the body. These sutures are primarily made from biocompatible materials such as polyglycolide (PGLA), polyglycolic acid (PGA), and cat gut, and are widely used in routine and complex surgeries on a variety of animals, including pets, livestock, aquatic animals, and racehorses. Their advantage is that they eliminate the need for postoperative suture removal, reducing stress and infection risks for animals and improving postoperative recovery efficiency.

The global Veterinary Absorbable Sutures market size was estimated at USD 553.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
