Abstracts

Veterinary antibacterial prescription drugs refer to a class of drugs used to prevent and treat bacterial infectious diseases of animals, which need to be purchased and used with veterinary prescriptions. Some drugs may pose potential risks to animal or human health and require strict control over their use. According to their chemical structure and mechanism of action, veterinary antibacterial prescription drugs can be classified into beta lactams, aminoglycosides, tetracyclines, macrolides, fluoroquinolones, sulfonamides, and other drugs. The market size of veterinary antibacterial prescription drugs has maintained steady growth, mainly due to the rapid development of global animal husbandry and the important role of veterinary antibacterial drugs in preventing and treating animal diseases. China is one of the largest markets in the world, and with the development of animal husbandry, the expansion of the pet market, and the increasing emphasis on animal health, market demand is constantly increasing. The global market competition for veterinary antibacterial prescription drugs is showing a multipolar trend, with internationally renowned companies such as ZylVet, Elanco Animal Health, and Vetoquinol occupying important shares in the global market due to their strong research and development capabilities and marketing capabilities; There are a large number of domestic enterprises in the field of veterinary antibiotics, but there are relatively few large-scale and strong enterprises. Market competition mainly focuses on product quality, brand influence, sales channels, and other aspects. The current challenges in the industry include strict policy regulation, drug resistance issues, high R&D investment, long cycles, and high technological barriers. The research and development of new antibacterial drugs in the future will become an important direction for the industry. The application of cutting-edge technologies such as genetic engineering and nanotechnology will promote product upgrading, improve drug efficacy and safety, and reduce the risk of drug resistance. Environmental regulations are becoming increasingly strict, and green production and sustainable development have

become industry consensus. Enterprises will increase investment in developing low toxicity and low residue antibacterial drugs to reduce environmental pollution. The expansion of the international market will become a new growth point for enterprises. Through technological cooperation and market development, Chinese veterinary antibacterial drug companies will gradually step onto the world stage.

The global Veterinary Antibacterial Prescription Drugs market size was estimated at USD 4980.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
