Abstracts

A veterinary automatic drencher is a device designed to administer liquid medications, fluids, or nutritional supplements to animals in a veterinary setting in an automated and precise manner. It typically consists of a reservoir to hold the liquid, a dispensing mechanism that can be programmed to deliver a specific volume of the liquid, and a nozzle or attachment that is placed in the animal's mouth or other appropriate location for the delivery. This type of equipment is used to ensure accurate dosing and efficient administration of substances to animals, reducing the risk of under - or over - dosing and minimizing stress on both the animals and the veterinary staff. It is especially useful for treating large numbers of animals or for administering medications that require precise measurement and consistent delivery.
