Veterinary diagnostics refer to the range of tests and procedures used by veterinarians to diagnose and treat diseases and conditions in animals. These diagnostics encompass a variety of techniques including blood tests, imaging (such as X-rays and ultrasounds), urine and fecal analysis, and genetic testing. The market for veterinary diagnostics is driven by the increasing prevalence of diseases in animals, the growing pet ownership rates globally, and the rising demand for quality animal healthcare services. As pet owners become more aware of the importance of early disease detection and prevention in their animals, the demand for advanced diagnostic tools and services is expected to rise.
