Report Overview

Veterinary implants refer to medical devices specifically designed for use in animals to support or replace damaged or missing biological structures. These implants are commonly used in veterinary orthopedic surgeries to repair fractures, correct deformities, or improve joint stability. Veterinary implants can include plates, screws, pins, and joint prostheses made from materials such as stainless steel, titanium, or bioabsorbable polymers. The market for veterinary implants is driven by the increasing pet ownership rates, growing demand for advanced veterinary care, and rising awareness about the benefits of orthopedic surgeries in animals.
