Abstracts

A vibrating weighing filler for the food industry is a highly accurate device that uses the principle of vibration to ensure the accuracy of the weighing and filling process. This device usually consists of one or more vibrating platforms with load cells and filling heads mounted on the platforms. When the product passes through the vibrating platform, the vibration causes the product to generate pressure on the load cell, thereby achieving accurate weighing. Once weighing is completed, the filling machine will automatically adjust the filling amount according to the weighing results to ensure that the amount of product in each package is accurate.
