### Report Overview

Vibration MEMS gyroscopes (Micro Electro Mechanical systems) also called micro-electromechanical systems, are gyroscopes that design, process, manufacture, measure and control micro/nano materials on the basis of micro/nano technology. It can integrate mechanical components, optical systems, drive components, and electric control systems into a micro-system of an overall unit. When the vibrating gyroscope acquires the angular velocity, it first performs basic vibration. When the angular velocity is applied, the previous vibration will change, and the gyroscope will output this change.
