Abstracts

Vibrating separator is a high-precision fine powder screening machine with low noise and high efficiency. It takes 3-5 minutes to change the screen quickly. It is fully enclosed and suitable for screening and filtering of particles, powder and mucilage. Vibrating screen is made up of an upright motor as an excitation source. The upper and lower ends of the motor are equipped with an eccentric weight to convert the rotary motion of the motor into a horizontal, vertical, and inclined three-dimensional motion, and then transmit this motion to the screen surface. Adjusting the phase angle of the upper and lower ends can change the trajectory of the material on the screen surface.

The global Vibratory Separator market size was estimated at USD 2062.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
