The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Video Conferencing Endpoint competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Video Conferencing Endpoint production reached approximately 4010 k units, with an average global market price of around US\$ 1685 per unit. Video conferencing system endpoints are physical equipment or software that people use to make video connections. Video conferencing endpoint mainly includes collaboration room endpoints and collaboration personal endpoints. Technological integration and intelligent upgrading The video conferencing equipment industry is undergoing a transition from basic audio and video transmission to full dimensional intelligent interaction. The deep empowerment of AI technology has become the core driving force, including intelligent noise reduction, real-time multilingual translation, virtual avatars, and other functions with a penetration rate of 65%. Computer vision technology assists in adjusting conference rhythm through facial expression analysis. 5G and edge computing work together to compress end-to-end delay to less than 100ms and support 8K UHD transmission. Quantum encryption technology is solving the trust problem in high security demand scenarios such as government affairs and finance. Scenario based and vertical domain penetration In the medical field, low latency transmission technology enables remote surgical guidance with sub millimeter level accuracy, and AI assisted diagnostic systems improve consultation efficiency. In the field of education, the dual teacher classroom model connects urban and rural resources through interactive whiteboards and answer systems, and builds virtual laboratories using metaverse technology. In the industrial field, AR remote assistance function is widely used in equipment operation and maintenance, improving operation and maintenance efficiency by 9 times, and supporting engineers to guide on-site operations

in real time through AR glasses. Future technological evolution direction Immersive experience: Spatial audio technology creates a 3D sound field with a directional perception error of less than 2 degrees, and holographic projection technology achieves "remote tactile feedback". Mixed Reality Fusion: Combining VR/AR with conference systems, digital avatars in metaverse conferences enable cross regional on-site interaction. Internet of Things collaboration: edge computing nodes and 5G work together to solve more than 60% of system delays, and intelligent terminals are linked with office furniture, whiteboards and other equipment.
