Abstracts

Video isolation amplifier ICs are integrated circuits designed to provide electrical isolation between input and output stages while accurately transmitting video signals, typically used in applications where ground loop elimination, noise reduction, and safety are critical, such as medical imaging equipment, industrial video monitoring systems, broadcast infrastructure, and automotive camera systems; these devices often incorporate isolation barriers using technologies like capacitive or magnetic coupling to prevent high-voltage transients, common-mode noise, or differences in ground potential from degrading signal integrity, ensuring compliance with safety standards (e.g., IEC 60601-1 for medical devices) while maintaining signal fidelity across the isolation barrier.

The global Video Isolation Amplifier Ic market size was estimated at USD 85.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
