Abstracts

Video laryngoscope devices are advanced medical instruments designed to facilitate endotracheal intubation by providing a real-time, high-resolution view of the glottis and vocal cords, typically through a camera or fiberoptic system located at the tip of the blade, which transmits the image to an external display screen; these devices are engineered to improve first-pass success rates, reduce intubation-related complications, and enhance visualization in difficult airway scenarios, making them indispensable tools in emergency medicine, anesthesiology, and critical care settings. The global market for video laryngoscope devices is characterized by robust growth driven by increasing demand for improved patient safety during airway management, rising prevalence of chronic respiratory diseases, and growing adoption in both hospital and pre-hospital environments; technological advancements, such as the integration of augmented reality, wireless connectivity, and disposable blades, are further expanding their utility and accessibility. Key market players are engaged in strategic initiatives including product innovation, partnerships, and geographic expansion to capitalize on emerging opportunities, while regulatory frameworks and reimbursement policies continue to shape market dynamics across regions.

The global Video Laryngoscope Devices market size was estimated at USD 1024.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
