Abstracts

A video parking guidance system is a type of parking system that uses video cameras and sensors to detect and track vehicles in a parking lot. The system then uses this information to provide drivers with guidance on where to park their vehicles. Video parking guidance system systems typically include a number of cameras that are strategically placed throughout the parking lot. The cameras are used to capture a real-time view of the parking lot. The system then uses this video footage to detect and track vehicles. Once the system has detected and tracked a vehicle, it can provide the driver with guidance on where to park. This guidance can be provided in a number of ways, such as through digital signage, mobile apps, or dashboard displays. The global video parking guidance system (VPGS) market is expected to grow significantly in the coming years, driven by the increasing demand from parking lot operators to improve the efficiency and convenience of parking. The growth of the video parking guidance system market is being attributed to a number of factors, including:

- Increasing demand from parking lot operators:** Parking lot operators are increasingly looking for ways to improve the efficiency and convenience of parking. Video parking guidance system systems can help to reduce parking time, improve parking efficiency, reduce traffic congestion, and improve safety in parking lots.
- Growing urbanization:** The world is becoming increasingly urbanized. This is leading to an increase in the number of vehicles on the road and an increase in the demand for parking. Video parking guidance system systems can help to address the challenges of parking in urban areas.
- Technological advancements:** Technological advancements in video analytics and machine learning are making video parking guidance system systems more accurate and efficient. This is driving the adoption of video parking guidance system systems by parking lot operators.

The video parking guidance system market is expected to witness significant growth in the coming years, driven by the factors mentioned above. The market is also expected to benefit from the growing demand for video parking guidance

system systems in emerging economies.

The global Video Parking Guidance System market size was estimated at USD 367.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
