Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Video Transmission SerDes Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Video Transmission SerDes Chips are key high-speed serializer/deserializer components designed for video signal transmission and display interconnection, enabling low-latency and high-bandwidth transmission of high-definition video data with excellent signal integrity and interference resistance. They are widely used in automotive imaging, display, and camera systems. In 2024, production reached 53.85 million units with an average price of \$2.6 per unit. The single-line annual capacity was approximately 500,000 units, and the average gross margin was about 55%. The upstream segment consists of silicon wafers, substrates, and packaging materials, as well as precision semiconductor manufacturing equipment such as lithography, etching, and ion implantation machines, with representative suppliers including SUMCO, GlobalWafers, Shin-Etsu, ASML, Applied Materials, Lam Research, and Chinese companies such as Shanghai Silicon Industry Group, AMEC, and JCET. The midstream focuses on device design and process implementation, covering physical-layer IP integration, high-speed link and mixed-signal circuit design, packaging and test process development, and signal integrity and reliability validation. Downstream applications target video display and imaging systems in commercial and passenger vehicles, with representative customers including Daimler, Volvo Trucks, Cummins, SAIC Motor, Geely, and BMW. Automotive-grade SerDes chips are positioned for accelerated adoption driven by the proliferation of multi-camera and multi-sensor ADAS/automated driving suites and the shift to high-bandwidth in-vehicle Ethernet architectures. Standardization efforts and open ecosystem initiatives are reducing integration friction and unit costs, while technical requirements for low latency,

deterministic links and automotive reliability create a high-barrier moat for qualified suppliers ? making SerDes not only a technical enabler for next-generation domain controllers but also an attractive, long-term market segment for semiconductor vendors and tier-1 suppliers.

The global Video Transmission SerDes Chip market size was estimated at USD 140.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.00% during the forecast period.
