## Abstracts

Vinburnine is a natural alkaloid compound obtained from the *Vinca minor* plant, commonly known as periwinkle. It falls under the category of indole alkaloids and shares similarities with Vincamine, another compound found in periwinkle leaves. Vinburnine is known for its vasodilatory properties, which means it can widen blood vessels, improving blood circulation. This characteristic has led to its utilization in pharmaceutical preparations, particularly for its potential to enhance cerebral blood flow. It has been explored for its potential therapeutic benefits in conditions related to inadequate blood supply to the brain, such as cognitive impairment, dementia, and certain neurological disorders. The industry trend surrounding Vinburnine has seen continued research and exploration of its medicinal potential. As with Vincamine, Vinburnine's vasodilatory effects and potential cognitive benefits have garnered interest from the pharmaceutical sector. Researchers are investigating its application in the development of drugs aimed at improving cerebral circulation and addressing conditions associated with inadequate blood flow to the brain. Furthermore, in the context of an aging population and increased awareness of brain health, Vinburnine-based products and supplements have gained attention in the health and wellness industry, contributing to its growing market presence.

The global Vinburnine market size was estimated at USD 80.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
