Abstracts

Vinyltoluene is a mixture of inter and para isomers, which has the advantages of lower toxicity, lower volatility, higher stability, higher flash point, less odor and more than styrene (SM). As a replacement for styrene (SM) monomer, it is mainly used in the production of high-grade unsaturated polyester resins, modified alkyd resins, vinyl resins, etc. Resins made with vinyltoluene are widely used in the impregnating insulating paint, coating and composite material industries. Resins made with vinyltoluene are widely used in the impregnating insulating paint, coating and composite material industries. At present, vinyl toluene (VT) is mainly used in resins, insulating impregnation varnishes, coatings and other fields. In the field of insulating impregnation varnishes, compared with styrene, vinyl toluene has a higher boiling point, which can effectively reduce the VOC volatilization of resins at room temperature and improve the environmental performance of product applications. The core manufacturers of vinyl toluene (VT) in the world are mainly distributed in the United States and China. Among them, Deltech in the United States, as the world's leading VT company, has a market share of more than 80%. Downstream demand is mainly distributed in resin, paint and coating production areas such as the United States, Europe, China, and Japan. With the improvement of global environmental protection requirements and the development of the wind power industry, environmentally friendly and high-performance insulating impregnation varnishes will become the mainstream application trend in the wind power industry, thereby bringing a certain growth space for the demand for vinyl toluene.

The global Vinyl Toluene market size was estimated at USD 94.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
