## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vinylcyclohexene Dioxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Vinylcyclohexene dioxide reached approximately 15 kilotons, with an average global market price of around USD 5800 per ton. Vinylcyclohexene dioxide (VCHD), also known as 4-vinyl-1-cyclohexene diepoxide, is a colorless to pale yellow liquid organic compound with the molecular formula  $C_{10}H_{14}O_2$ , characterized by two reactive epoxide (oxirane) groups attached to a cyclohexene ring structure. It is primarily used as a reactive diluent, crosslinking agent, or modifier in epoxy resin formulations, coatings, adhesives, and composites, where it enhances mechanical strength, chemical resistance, and thermal stability. VCHD is valued for its low viscosity, good miscibility with other resins, and ability to cure under various conditions, but it is also an irritant and requires careful handling to avoid skin, eye, and respiratory exposure. The key market drivers for vinylcyclohexene dioxide (VCHD) stem from its role as a versatile reactive diluent and crosslinking agent in high-performance epoxy resin systems used across coatings, adhesives, composites, and electrical insulation applications. Demand is fueled by the growing need for lightweight, durable, and chemically resistant materials in sectors such as automotive, aerospace, construction, and electronics, where VCHD improves resin processability, reduces viscosity, and enhances cured product properties. Additionally, the expansion of renewable energy infrastructure, particularly wind turbine blades and high-voltage electrical components, is boosting consumption, while ongoing innovation in low-VOC and high-performance coatings further supports market growth. However, regulatory scrutiny over chemical safety and potential health hazards also influences production and adoption trends.

The global Vinylcyclohexene Dioxide market size was estimated at USD 86.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
