Report Overview:

Vinyl Ester Resins is produced by the esterification of epoxy resins in the presence of monocarboxylic acid. Vinyl Ester Resins are designed much more specifically as they are hybrid form of Polyester Resins that has been strengthened by the addition of Epoxy Resins. They have high resistance to greater vibrational loads because they are more tolerant of stretching than Polyester Resins, showing less stress cracking and are therefore able to absorb larger impacts without damage. Vinyl ester resins are less absorbent of water than Polyester Resins and also possess outstanding thermal stability.

The Global Vinylester Resins Market Size was estimated at USD 560.21 million in 2023 and is projected to reach USD 799.17 million by 2029, exhibiting a CAGR of 6.10% during the forecast period.
