Report Overview:

Viral clearance services refer to viral removal or viral inactivation service. Viral clearance studies are a critical element toward ensuring that an acceptable level of viral safety has been achieved for biological products. The goal of these studies is to demonstrate that the manufacturing purification process has the ability to inactivate and/or remove viruses that are known to contaminate or which may possibly contaminate the starting materials, as well as additional viruses that are models for a broad variety of viruses. Viral clearance studies provide a complementary strategy to direct testing of cell banks, raw materials and bioreactor harvests, which may not detect all viruses that could potentially contaminate the product.
