## Abstracts

The virtual dressing system is a virtual environment that uses virtual reality (VR) or augmented reality (AR) technology to allow users to try on clothing during online shopping through computer-generated images and simulations. It simulates the functions of a traditional physical fitting room, allowing users to choose clothing of different styles, sizes and colors, and observe the appearance and effect of clothing in a virtual environment, having a real offline fitting experience. Through virtual fitting, users can better understand the fit and style of clothing without trying it on in person, so as to make more informed purchasing decisions.

The global Virtual Dressing System market size was estimated at USD 4705.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.00% during the forecast period.
