Abstracts

Virtual patient simulation (VPS) refers to an interactive, computer-based technology that replicates clinical scenarios for healthcare education and training, enabling learners?such as medical students, nurses, and other healthcare professionals?to diagnose, treat, and manage virtual patients in a risk-free environment. These simulations often incorporate realistic physiological models, dynamic patient responses, and branching narratives that adapt to user decisions, providing experiential learning that bridges theoretical knowledge and practical application. VPS systems can range from simple case-based exercises to highly immersive platforms using virtual or augmented reality, and they are designed to improve clinical reasoning, communication skills, and patient safety outcomes while reducing reliance on traditional methods like standardized patients or real clinical encounters.

The global Virtual Patient Simulation market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
