Abstracts

Virtual payment systems, also known as digital or electronic payment systems, refer to technologies and platforms that facilitate the transfer of monetary value between parties without the physical exchange of cash or traditional paper-based instruments. These systems encompass a wide range of solutions, including mobile wallets, peer-to-peer (P2P) payment apps, contactless card transactions, online banking transfers, and cryptocurrency-based payments. They rely on secure encryption, authentication protocols, and digital infrastructure to enable instant, remote, and often cross-border transactions. By digitizing financial interactions, virtual payment systems enhance convenience, reduce processing times, lower operational costs, and improve financial inclusion, particularly in regions with limited access to traditional banking services. The core functionality of these systems centers on the authorization, clearing, and settlement of payments through electronic channels, integrating with existing financial networks or operating on decentralized frameworks.

The global Virtual Payment Systems market size was estimated at USD 10250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.
