Report Overview:

This report studies the Virtual Prototypes market, Virtual prototyping is a method in the process of product development. It involves using computer-aided design (CAD), computer-automated design (CAutoD) and computer-aided engineering (CAE) software to validate a design before committing to making a physical prototype. This is done by creating (usually 3D) computer generated geometrical shapes (parts) and either combining them into an "assembly" and testing different mechanical motions, fit and function. The assembly or individual parts could be opened in CAE software to simulate the behavior of the product in the real world.

The Global Virtual Prototypes Market Size was estimated at USD 632.14 million in 2023 and is projected to reach USD 1500.74 million by 2029, exhibiting a CAGR of 15.50% during the forecast period.
