Abstracts

Virtual staging software refers to a specialized category of digital tools that use computer-generated imagery (CGI), augmented reality (AR), and artificial intelligence (AI) to digitally furnish, decorate, and enhance vacant or outdated real estate spaces in photographs, allowing real estate professionals, photographers, and interior designers to present properties in an appealing, fully furnished state without the logistical and financial burdens of physical staging. These platforms typically feature extensive libraries of furniture, decor, lighting, and finishes that can be realistically superimposed onto images of empty rooms, often incorporating accurate scaling, shadows, reflections, and perspective adjustments to create photorealistic visualizations that help prospective buyers or tenants better visualize a property's potential. The software may also include collaboration features, integration with listing platforms, and options for both fully automated AI-driven staging and manual, customizable design workflows.

The global Virtual Staging Software market size was estimated at USD 125.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
