Abstracts

Virtual vet telemedicine refers to the delivery of veterinary healthcare services remotely through digital communication platforms, enabling pet owners to consult with licensed veterinarians via video calls, chat, or phone for non-emergency issues such as behavioral advice, minor ailments, post-operative follow-ups, nutrition guidance, and prescription refills, while excluding hands-on procedures, diagnostics requiring physical intervention, or emergency care; this model enhances accessibility, reduces stress for pets and owners by eliminating travel, and serves as a complementary service to traditional in-clinic visits rather than a full replacement.
